

CCS/CCA High Acuity Shelter Referral Form

QUALIFYING Characteristics of the referred people to CCS/CCA High Acuity Shelters.

- Observable instances of pervasive and persistent behavioral health symptoms
- Long periods of homelessness or repeatedly having lost housing
- Low social functioning or disordered behaviors that impact ability to access or engage in traditional behavioral health services
- Lack of service connection and vulnerability to predatory behavior
- Requires assertive, intensive case management and other services to help access resources, stabilize, and transfer to longer-term housing and healthcare services
- Able to independently meet their Activities of Daily Living – such using the toilet and other hygiene needs - without another person's assistance.

*

34

Survival Skills

*

1	2	3	4
They independently navigate available resources and assess safety risks. They use an appropriate level of caution in dangerous situations and avoid negative consequences.	They know about but rarely use any services for food, hygiene or shelter. They can plan to get their needs met, but they engage in risky behavior to meet their needs. However, they may exhibit skills to avoid consequences or dangerous situations.	They know about but do not use any services for food, hygiene, or shelter. They do not plan ahead to get their needs met. Despite awareness of risk, they engage in risky behavior to meet their needs. They are not as skilled at avoiding consequences or dangerous situations.	They are unaware of any services for food, hygiene, or shelter. They are only aware of their immediate needs without any indication of future planning. They engage in risky behavior often resulting in legal consequences or dangerous situations.

Further description of survival skills:

*

Social Functioning

*

1	2	3	4
Not prone to interpersonal conflict, shows insight into how their behavior impacts others. They avoid predatory relationships.	They may be aware of their behaviors that result in negative interactions with others. However, they often find themselves in conflict. They may report that people take advantage of them (i.e. befriending them but then stealing from them). They try to avoid predatory relationships but find themselves repeating the same patterns.	They may deny that their behaviors result in negative interactions with others. Instead, they claim that it is mostly or always someone else's fault. They may report that people take advantage of them but tend to stay in or seek out predatory relationships.	They are unaware that their behaviors lead to negative interactions with others. They are unaware when others are taking advantage of them and are continually staying in or seeking out predatory relationships.

Further description of social functioning:

*

Substance Use

*

1	2	3	4
They rarely use substances or abstain from substances. They are not in need of substance use services.	They use substances occasionally. Their use negatively impacts mental health symptoms, ability to meet basic needs, and/or social functioning. They may be connected to substance use services but do not engage.	They frequently use substances. Their use negatively impacts mental health symptoms, ability to meet basic needs, and/or social functioning. They may be interested in substance use services but are not connected or not engaged.	Seeking and using substances takes priority over other needs. Their use negatively impacts mental health symptoms, ability to meet basic needs, or social functioning. They are not connected to substances use services or it is unknown.

39

Further description of substance use:

*

Homelessness *

1	2	3
They have been unhoused for less than one year or have been experiencing housing instability for less than one year.	They have been unhoused for one year or more. OR they have been experiencing housing instability for one year or more.	They have been unhoused for 5 years or more. OR they have been experiencing housing instability for 5 years or more.
